Money vs Legal Tender

The ***people*** behind the ***system*** have been conspiring to steal ***money*** from us over many centuries, but we need to know what ***money*** is to understand what has been stolen from us.

Money

For most people operating within the ***global monetary system***, the actual use of ***money*** is long gone, with much of the world no longer using it.

Within mankind's history, early barter would function for trade, but had limitations.

One such limitation was ***restricted value*** within a ***trade***, or the inability to ***save*** your ***wealth*** for a large project requiring many workers, such as building a house or ship.

Note: ***wealth*** is your ***time*** and ***freedom***, often referred to as ***"sweat equity"***.

The invention of ***money***, which was created through necessity within the ***free market***, and not by a ***monarchy*** or ***government***, solved this issue and gave many other benefits, such as:

- The ability for long term storage of your time and freedom.
- Money became a medium of exchange.
- Money was portable.
- It was durable.
- It became divisible.
- It was fungible.

Note: ***fungible*** means a familiar ***commodity*** that is replaceable by another identical item, making the item ***interchangeable***.

Also Note: originally from the ***Latin*** word ***"commoditatem"***, meaning ***"convenience"*** and ***"advantage"***, the ***Old French*** word ***"commodit"*** meaning ***"benefit"*** and ***"profit"*** became ***commodity.***

The suffix ***"ity"*** means ***"quality"***, ***"state"*** or ***"degree"***, so ***"the state"*** of being ***"common"*** ergo ***commodity***, or advantageous and profitable to all.

As money is ***commodity***-based, it is extremely ***stable*** due to its foundation being the combination of someone's work, or ***"sweat equity"***, and a ***commodity*** of intrinsic value, such as gold.

Furthermore, and most importantly, there is no ***3rd party risk***, meaning there is no ***3rd party*** involved making a claim upon the money being used, with the recipient holding ***full*** and ***complete title***, or ***"allodial title"*** to the money.

Value vs Price

Value and ***price*** are ***not*** the same. ***Price*** is the ***nominal*** or ***numeral*** amount we pay for an item or service, whereas ***value*** is the ***importance***, ***usefulness*** or ***worth*** of the item or service.

Therefore, when a trade occurs the ***purchaser*** is placing a ***higher value*** on the ***item*** or ***service*** being offered than the ***price*** being set, meaning ***value*** is in the eye of the beholder.

However, the ***seller*** would ***value*** the ***price*** being set ***greater*** than the ***item*** or ***service*** being sold, making for an ***equitable trade*** where ***both parties*** have ***increased wealth***.

It is this unseen ***increased wealth*** by both parties that help the ***"hidden hand"*** of the free market to create a ***"collected wealth"*** for everyone operating within the same market.

However, this only works with ***money***, ***not*** fiat currency or ***"legal tender"***, which has the exact opposite result, and that's the ***reduction*** of collective wealth.

Legal Tender

A ***"tender"*** is the name given to a small boat that ***"tends"*** to the needs of a larger ship, usually by transporting people or supplies from shore or another ship.

With the word ***legal*** referring to a ***contract***, the term ***"legal tender"*** means to ***"tend"*** to a debt sometime in the ***future***, by way of ***contract***.

Meaning, by using ***legal tender*** the ***debt*** is ***never*** paid, as the ***"small boat" never*** left the ***"shore"*** to deliver the ***"money"***.

Today the ***legal tender*** that most ***corporate countries*** use is printed by the central bank of said ***country***, which is privately owned.

Consider this the same as a ***casino*** stamping out ***plastic poker chips*** that only have ***value*** within the ***jurisdiction*** of that ***particular casino***, but are ***worthless*** in any other.

<u>Note:</u> you ***cannot*** print ***money***, only ***notes***, which are ***negotiable instruments***. ***Notes*** are ***written; money*** is <u>***not***</u>.

You do <u>***not***</u> own these ***notes***; you just have ***use*** of them, at a cost:

- ***Inflation***: a ***stealth tax*** operating ***way above*** your pay rise, causing ***wage compression***.
- ***Depreciation***: you require ***more*** and ***more*** notes to purchase the ***same item***.
- ***Taxation***: a tax or ***duty*** is to be paid on the use of the ***bank's promissory note***.
- ***Stamp duty***: security instruments also incur a ***stamp duty***, or tax.
- ***Value cancelled***: the ***note value*** can be ***rescinded*** and ***withdrawn*** at any time, making the ***note worthless***.
- ***Limited fungibility***: only ***fungible*** within the ***jurisdiction*** of the ***country*** you are operating in.
- ***Fixed Jurisdiction***: bank notes only operate in ***one jurisdiction***, that of the ***pauper***.

The ***jurisdiction*** of the ***debtor*** is called a ***democracy***, which only uses ***legal tender***, as everyone within that jurisdiction is considered ***bankrupt*** with ***no title*** to property.

They are referred to as ***paupers***, hence the type ***"P"*** on your passport.

<u>Note:</u> only central banks hold gold; ***"city"*** or ***"high-street"*** banks do <u>***not***</u>, they only hold debt.

The ***plebeians***, ***citizens***, ***civilians, paupers*** and ***members of the public*** only have access to high street banks, which only deal in ***legal tender***, or ***credit*** and ***debt*** notes.

If you have registered to vote within this ***democracy***, you have entered a ***ward*** with the ***loss*** of your ***authority*** and have become a ***constituent***, meaning you have agreed to pay the ***debts*** of the local state or council.

Stamp Duty

Stamp duty only applies to ***security instruments***, such as ***negotiable notes***, ***promissory notes***, ***cheques***, ***bank notes***, but does ***not*** apply to ***money*** such as gold and silver.

Therefore, if you buy your home with ***gold*** then there is ***no*** stamp duty to pay, as you did ***not*** use ***legal tender*** bank notes.

When you take out a ***"loan"*** and pay with ***bank notes***, you are now required to ***register*** your ***dwelling*** until the debt is paid off, which it ***never*** is.

Note: mortgage companies commit fraud when using the word ***loan***, as they ***loan nothing***, because you are the ***creditor***.

Summary

You own ***money*** outright with no ***3rd party*** claim or risk, however you do ***not*** own fiat currency; you just have use of it, at a price.

- ***Money*** is ***tax-free***, whereas ***fiat currency*** is ***taxed*** for the ***privilege*** of using it.
- ***Money*** is ***not*** the root of all evils, ***fiat currency*** is.
- ***Money*** is the ***foundation*** to ***prosperity*** for ***all***; ***fiat currency*** is ***destitution*** for ***all***.

Using a ***debt-based monetary system***, at interest, is nothing but a ***Ponzi scheme***, and will collapse, but not before stealing the ***wealth*** from most of the people who use it.

The creation of ***credit***, through the use of your ***live certificate of birth***, operates above the ***jurisdiction*** of the ***debtor***, and within this system ***children*** have become ***collateral*** to the ***debt***.
